

Item no. 250/531
Manufacturer's no. 250/531-1

R-EVOLUTION Locking System Round chrome

Information

Dimensions	31 x 40 x 31 mm
Pack size	18 x 12 x 5 cm
Net weight	72 g
Gross weight	72 g
Catalogue page	376

Specifications

Colour	chrome
Content	1 piece
Material	plastic
Packaging	retail packed
Wall thickness	14.5 – 19 mm

Confurn R-EVOLUTION locking system

The Confurn R-EVOLUTION locking system is an innovative push-to-open system consisting of two mounting units that are screwed directly to the panel. Fitting and lock engage precisely and are fixed to the furniture front – an additional screw in the front is not required. No height adjustment of the knob is necessary; the knob always sits correctly.

Advantages:

- **Easy to install:** the system consists of only two components and can be mounted quickly and easily.
- **For front thicknesses from 14.5 to 17 mm (with spacer element 12 to 14.5 mm):** R-EVOLUTION is a closed system that ensures high precision fit across a wide tolerance range.
- **No knob adjustment required:** the unit comprising knob, rosette and push-to-open mechanism ensures the correct position of the handle element regardless of front thickness.
- **Exact alignment through milling or drilling:** the complete unit is precisely aligned via the milling hole. For round rosettes, an additional drill hole provides anti-rotation

protection.

• **Simplified construction:** both components are only screwed together; no screws are needed in the door material. This eliminates the need for reinforcement in the door area – doors can be designed lighter and more cost-effectively.

• **Plastic-mounted knob:** the knob runs almost wear-free and especially quietly in a precisely fitting plastic channel.

• **Space-saving design:** the mechanism and components require little installation space. The lock and rosette are compact and particularly slim.
