

Item no. 311/633
Manufacturer's no. 0809200

Reinforcing Sleeve 6 x 1 Brass

GOK

Information

Dimensions	6 mm
Pack size	17 x 10 x 4 cm
Net weight	2 g
Gross weight	2 g

The brass reinforcing sleeve serves to reliably stabilise thin-walled pipes or soft pipe materials such as copper pipes for installation with cutting ring fittings. Its use prevents the deformation or indentation of the pipe material – a prerequisite for a permanently tight connection.

When using cutting ring fittings with non-steel pipes, the use of a reinforcing sleeve is mandatory. Special attention should always be paid to using the appropriate sleeve, especially with copper or aluminium pipes: for aluminium pipes, a steel reinforcing sleeve is required!

Important: in Germany, the installation of copper pipes with reinforcing sleeves in liquefied gas systems is only permitted in the caravan and marine sectors.
