Grey Water Collection System Van Edition 10 l

SIMPLY-COLLECT®

Information

Dimensions	36x10x25 cm
Pack size	36x25x10 cm
Net weight	400 g
Gross weight	630 g

With this grey water collection system for vans and DIY conversions, you can dispose of wastewater cleanly, comfortably and flexibly. The collection container with a 10-litre volume is compatible with all common wastewater pipe systems and is connected directly where the grey water is produced – under the sink. The system can be expanded at any time if needed.

The closed connection system reliably prevents liquid leakage. Valves on both sides ensure clean handling without back-flow. This prevents unpleasant odours, contamination of the surroundings and keeps pests out.

The grey water can be conveniently emptied at home or any desired location without needing to move the vehicle. Long waiting times at supply and disposal stations are eliminated.

All components are of high quality and designed for long service life. The system is washable and easy to maintain. Thanks to the transparent design, you can always keep an eye on the fill level. Due to its low weight and space requirements, the grey water collection system is ideal for space-saving storage in motorhomes or caravans.

The set consists of:

- Connection adapter for direct installation under or at the sink

Specifications
