HYDRACELL
 POWERING A POSITIVE FUTURE

Information

Dimensions	20.6x3.5 cm
Pack size	28x8x5 cm
Net weight	190 g
Gross weight	240 g

HydraCell LED flashlights feature innovative TC energy cells that are activated by water. Additionally, thanks to the water-activated energy cells, you need far fewer disposable batteries.

Long-lasting light

Thanks to the high-quality Cree LED with an impressive light output of 200 or 350 lumens, HydraCell LED flashlights provide long-lasting, bright light – whenever you need it. The lens is also continuously adjustable: you have the choice between a sharply focused beam of light and a broadly illuminating flashlight.

The HydraCell flashlights are the ideal companion for camping, hiking or emergencies. Shockproof and splash-proof: IP65.

Versatile activation options

If you ever find yourself in a difficult situation and need light quickly, the flashlight reliably comes to your aid. Simply activate or reactivate the energy cells in a non-oil-based liquid – be it rainwater, stream water, seawater or dirty water. This way, you always have energy available wherever you are.

The AQUA FLASH offers a luminous range distance of 150 m and is equipped with a hand strap for a secure
