## Battery Computer MT 5000 H

**BÜTTNER**  
→DOMETIC

### Information

|              |                  |
|--------------|------------------|
| Dimensions   | 80x85x20 mm      |
| Pack size    | 25.9x21.7x9.7 cm |
| Net weight   | 550 g            |
| Gross weight | 550 g            |

Those who already use a solar panel and are now retrofitting a fuel cell can of course also purchase the MT 5000 H battery computer separately to control it. After plugging it into the fuel cell, it takes over the control functions of the system and provides information about the current charge/discharge current and the capacity still available in the RV battery via the display. Since it is equipped with a 400 A shunt, even very high currents can be measured. Suitable for the following fuel cell series: EFOY 600 – EFOY 2200 and Comfort 80 – Comfort 210. Not suitable for use with the current EFOY BT fuel cell.

### Specifications

|                 |             |
|-----------------|-------------|
| Nominal voltage | 12 V   24 V |
| Nominal current | 8 mA        |
| Type            | MT 5000 H   |
