

Item no. 452/133
Manufacturer's no. M9700

Marten Repellent with Ultrasound and High Voltage M9700 Self-Sufficient Combi Appliance

Information

Dimensions	19x18.5x8.5 cm
Pack size	19x18.5x8.5 cm
Net weight	930 g
Gross weight	990 g
Catalogue page	333

- Completely sealed 360° dome speaker for particularly deep installation in splash water areas
- Battery operation independent of the vehicle's electrical system with protection function
- Low battery indicator with LED
- 6 multi-contact high-voltage brushes
- Pulsating sine wave ultrasound without habituation effect
- Automatic switch-on and switch-off, plus safety bonnet switch
- Suitable for CAN bus and hybrid
- Waterproof compact plug for easy replacement
- E1 mark of the German Federal Motor Transport Authority
- Self-extinguishing plastic
- Extendable by 4 additional contacts
- Also suitable for motorhomes, electric vehicles and plug-in hybrids

Protecting your vehicle from marten damage is crucial to avoid expensive repairs and unwanted surprises. Vehicles that

Specifications

IP protection class	IP65
Nominal voltage	6 V

are stationary for long periods of time – such as classic cars, motorhomes or even modern electric vehicles – are particularly susceptible to these small but dangerous intruders. The M9700 battery-operated defence system offers an innovative and effective solution to this problem.

The M9700 is an advanced device specifically designed to protect your vehicle from martens without relying on the vehicle's electrical system. Powered by AA batteries, it provides independent and reliable protection even if the vehicle is not moved for long periods of time. The uniqueness of the M9700 lies in its multi-contact high-voltage brushes, which have positive and negative poles and thus penetrate the dense fur of the martens. An electric shock that effectively drives the animals away without injuring or killing them provides humane protection.

The high-voltage defence is complemented by the use of pulsating sinusoidal ultrasound, which is emitted through a fully waterproof dome speaker. This ultrasound, which is specially designed so that martens cannot get used to it, contributes to all-round defence. The speaker is designed for deep installation in splash water areas and offers comprehensive protection thanks to its 360° coverage.

Other features of the M9700 include a low-battery indicator with LED, which informs you in good time when the battery needs to be replaced, as well as automatic switch-on and switch-off of the device to save energy. The safety bonnet switch increases safety when using the device. In addition, the M9700 is suitable for CAN bus and hybrid and has a waterproof compact plug, which simplifies the replacement of the device.

With the E1 mark of the German Federal Motor Transport Authority and the use of self-extinguishing plastic, the M9700 emphasises its quality and safety. It is not only suitable for classic cars and motorhomes, but also perfect for use in electric vehicles and plug-in hybrids. Furthermore, the system can be extended by four additional contacts to increase the scope of protection as required.

Invest in the protection of your vehicle with the M9700 to effectively prevent marten damage and ensure the longevity and value of your vehicle.
