Peg&Stop HeavyDuty is Peggy Peg's strongest screw peg. It is made from recycled marine grade stainless steel and is specifically designed for use with an impact wrench. Designed for highly compacted, extremely hard and rocky soils in exceptional conditions. Due to the height-adjustable lock nut 2.0 (with hook), the screw peg does not always have to be screwed in all the way. By turning the lock nut one or two times to the right, this peg can both fasten the Fix&Go anchor plates 2.0 with counterpressure and securely tension tents and storm straps. Simply screw in until the peg has no more room and is firmly anchored in the ground. Then turn the nut to the lowest possible point and hook in the line or tensioning element – done. The material is salt-water-resistant and rustproof.
